## **Create and print labels**

#### 1. Select a label

Select a standard label from "Select label" in the menu. Use the selecting tool "Product type", "Printer type" and "Product family" to easily find the desired label.

**Tips!** If you wish to create a new label with customized settings this will be possible with the "Label" tool in the menu.

#### 2. Select table columns

Select table columns to be used as source for each row of data on the product in the template guide. Close the template guide when you are finished.

#### 3. Entering data

Enter your data directly into the table or use the "Repeat" or "Sequense" feature in the "Table" meny. For "Repeat" and "Sequense", enter your data in each field and choose OK. You can also use the copy and paste function or import text files and Excel files into your table. The "Import" funktion is available in the "Table" menu.

#### 4. Print labels

Some printers does not support the paper size "User defined" and therefore needs to be adjusted into a "standard format" instead. Your printer may also require an adjustment of the top and leftmargin for proper placement of the data on the label. This can easily be done with the tool "Margins" in the "Label" meny. Make a test print on a plain paper to ensure that settings are implemented correctly before you print your labels.

**Tips!** Store your label print settings to a specific printer. Choose "Select device" and "Store setting", click at the "Setup" button and select printer. When finished, save the definition in the "Label" menu.
